## PROFESSIONAL SUMMARY

Cybersecurity and software engineering student with hands-on SOC experience across FortiSIEM, FortiSOAR, and IBM QRadar, complemented by active internship roles in threat detection and network defense. Builder of production-grade security SaaS with distributed backend architecture, LLM integration, and end-to-end infrastructure ownership. Holds CEH certification and brings cross-domain depth spanning SIEM operations, secure API development, OT/ICS security concepts, and cloud-native deployment. Targets roles in SOC analysis, cybersecurity engineering, or security-focused full-stack development.

## TECHNICAL SKILLS

**Security & SIEM:** IBM QRadar, FortiSIEM, FortiSOAR, FortiGate, FortiSwitch, Kali Linux, Wireshark, Nmap  
**Networking & Protocols:** TCP/IP, VLANs, SSL/TLS, DNS (SPF/DMARC), Firewall Configuration, VLAN Segmentation, IP Addressing, CLI/Web-GUI Administration  
**Incident Response:** Alert Triage, Log Correlation, Threat Investigation, Ticket Management, Escalation Workflows  
**Programming:** Python, TypeScript, SQL  
**Backend & Systems:** FastAPI, AsyncIO, Celery, Redis, REST API Design, SQLAlchemy, JWT Authentication, HMAC Verification  
**Frontend:** Next.js 14, React.js  
**Databases:** PostgreSQL, Alembic (Schema Migrations), Query Optimization  
**Infrastructure & DevOps:** Docker, Git, Asynchronous Architecture, Distributed Task Queues  
**AI / Integrations:** LLM Integration (Claude API), Razorpay Payment Gateway  
**OT / ICS Security:** CODESYS, PLC Programming (IEC 61131-3), Modbus TCP, Purdue Model, IEC 62443 Concepts

## EXPERIENCE

**Cybersecurity Intern** | **Fencensense Technologies Pvt. Ltd.** Jan 2026 – Present

- Monitored and triaged security events across FortiSIEM, FortiSOAR, and IBM QRadar, investigating 20+ alert categories including authentication anomalies, suspicious network activity, and policy violations.
- Configured and troubleshooted enterprise network infrastructure — FortiGate firewalls, routers, switches, and FortiSwitch devices — performing VLAN segmentation, interface setup, and IP addressing via CLI and Web GUI.
- Created and maintained incident tickets, documenting root-cause findings and escalating confirmed security incidents to relevant response teams, reducing mean-time-to-escalate through structured documentation.

*Previously: Cybersecurity Intern — Amroha Police Internship (2025), supporting real-world cybercrime investigations and law enforcement incident response workflows.*

## PROJECTS

**NAANZ — AI-Powered Security Audit SaaS** | **Solo Architect & Developer** 2024 – Present

**Live App:** [nanz-drab.vercel.app](https://nanz-drab.vercel.app)

FastAPI · Celery · Redis · PostgreSQL · AsyncIO · SQLAlchemy · Alembic · Docker · Claude API · Razorpay · JWT · Next.js 14

- Architected a distributed vulnerability scanning pipeline (FastAPI + Celery + Redis) covering SSL/TLS, DNS (SPF/DMARC), and open-port intelligence — enabling fully concurrent scan execution and eliminating request-blocking bottlenecks.
- Built an async-first backend (AsyncIO + SQLAlchemy) to sustain high-concurrency workloads, maintaining consistent API response times under parallel scan jobs without degradation.
- Integrated LLM-driven report generation via Claude API to automatically translate raw vulnerability findings into actionable, non-technical business-impact insights, reducing interpretation overhead for non-engineering stakeholders.
- Designed a production-grade data layer (PostgreSQL + Alembic migrations + Docker) ensuring schema reproducibility, fault tolerance, and zero-downtime deployment updates.
- Implemented secure monetization and access-control layer (Razorpay + HMAC signature verification + JWT) enabling idempotent payment transactions and gated report delivery tied to subscription tiers.

## SIEM Threat Detection & Log Analysis Lab | Solo Build

2024

*IBM QRadar · FortiSIEM · Kali Linux · Wireshark · Nmap*

- Designed and deployed a SOC-style home lab integrating IBM QRadar and FortiSIEM to ingest, correlate, and alert on simulated threat activity across controlled network segments.
- Simulated realistic attack scenarios from Kali Linux — including port scans, brute-force authentication attempts, and anomalous lateral movement — to generate representative log data for SIEM tuning.
- Investigated SIEM alerts using log correlation techniques, identifying attack patterns across authentication and network logs and reducing false-positive alert volume through rule refinement.
- Captured and analyzed network packets in Wireshark to validate abnormal traffic patterns, cross-referencing with SIEM alerts to confirm attack behavior and strengthen detection fidelity.

## EDUCATION

---

### B.Tech — Computer Science & Engineering (Cybersecurity) | Bennett University, Greater Noida

*Expected May 2027*

- Relevant Coursework: Network Security, Cryptography, Operating Systems, Database Systems, Cloud Computing

**Senior Secondary (Class XII)** — Auckland House School, Shimla

**Middle School (Class III–VII)** — Bishop Cotton School, Shimla

## CERTIFICATIONS

---

**Certified Ethical Hacker (CEH)** | EC-Council | 2025
